Convenient Functions When Editing

When moving from the Play screen to Effect/System settings, you can jump to a specific parameter by pressing the following buttons simultaneously.

Buttons	Jump destination
Hold down [◀] and press [EFFECTS]	FxChain:
[▶]	Ctl: CTL1 Func
	Asgn1: On/Off

Buttons	Jump destination
Hold down [◀] and press [SYSTEM]	Sys: Patch Extent
[▶]	SysCtl: CTL1 Func
	USBAudio: Routing

Alternate Tuning (AltTune: Type)

Owner's Manual p. 8

The strings of the guitar are tuned as follows depending on the type you select.

Type		6	5	4	3	2	1
OPEN	OPEN D	D	A	D	F [♯] G ^b	A	D
	OPEN E	E	B	E	G [♯] A ^b	B	E
	OPEN G	D	G	D	G	B	D
	OPEN A	E	A	E	A	C [♯] D ^b	E
DROP	DROP D	D	A	D	G	B	E
	DROP D ^b	C [♯] D ^b	G [♯] A ^b	C [♯] D ^b	F [♯] G ^b	A [♯] B ^b	D [♯] E ^b

USER		-24--+24 of the normal tuning					

Tuning of the secondary strings when the 12Str: Type is NORMAL (interval from the primary strings)

Type	6	5	4	3	2	1
12STR	+12	+12	+12	+12	0	0

FX Parameter

For an explanation of the parameters other than the FX parameters, refer to the owner's manual.

FX (Fx:)

You can select the effect to be used from the following.

Parameter	Explanation
★ On/Off	Turns this effect on/off.
Type	Type of FX
OD/DS	Distorts the sound to create long sustain.
COMPRESSOR	Produces a long sustain by evening out the volume level of the input signal. You can also use it as a limiter to suppress only the sound peaks and prevent distortion.
LIMITER	Attenuates loud input levels to prevent distortion.
EQ	Adjusts the tone as an equalizer.
T. WAH	A wah effect is produced according to your picking dynamics.
PITCH SHIFTER	Changes the pitch of the original sound (up or down) within a range of two octaves.
HARMONIST	An effect where the amount of shifting is adjusted according to an analysis of the guitar input, allowing you to create harmony based on diatonic scales.
PEDAL BEND	Lets you use the pedal to get a pitch bend effect.
PHASER	By adding varied-phase portions to the direct sound, the phaser effect gives a whooshing, swirling character to the sound.
FLANGER	Gives a twisting, jet-airplane-like character to the sound.
TREMOLO	Creates a cyclic change in volume.
PAN	With the volume level of the left and right sides alternately changing, when playing sound in stereo, you can get an effect that makes the guitar sound appear to fly back and forth between the speakers.
ROTARY	Produces an effect like the sound of a rotary speaker.
UNI-V	Models a Uni-Vibe. Although this resembles a phaser effect, it also provides a unique undulation that you can't get with a regular phaser.
CHORUS	A slightly detuned sound is added to the original sound to add depth and breadth.
DELAY	Adds delayed sound to the direct sound, giving more body to the sound or creating special effects.

OD/DS (FxODDS:)

Parameter	Explanation
Type	Type of OD/DS
MID BOOST	A booster with unique characteristics in the midrange. Making the connection before the amp produces sound suitable for solos.
CLEAN BOOST	This not only functions as a booster, but also produces a clean tone that has punch even when used alone.
TREBLE BOOST	This is a booster that has bright characteristics.
CRUNCH	A lustrous crunch sound with an added element of amp distortion.
NATURAL OD	An overdrive sound that provides distortion with a natural feeling.
WARM OD	A warm overdrive.
FAT DS	A distortion sound with thick distortion.
LEAD DS	Produces a distortion sound with both the smoothness of an overdrive along with a deep distortion.
METAL DS	A distortion sound that is ideal for performances of heavy riffs.
OCT FUZZ	A fuzz sound with rich harmonic content.
BLUES OD	A crunch sound of the BOSS BD-2. This produces distortion that faithfully reproduces the nuances of picking.
OD-1	Models the sound of the BOSS OD-1. Produces sweet, mild distortion.
T-SCREAM	Models an Ibanez TS-808.
TURBO OD	High-gain overdrive sound of the BOSS OD-2.
DIST	Gives a basic, traditional distortion sound.
RAT	Models a Proco RAT.
GUV DS	Models a Marshall GUV' NOR.
DST+	Models a MXR DISTORTION+.
METAL ZONE	Models the sound of the BOSS MT-2. It produces a wide range of metal sounds, from old style to slash metal.
'60S FUZZ	Models a Fuzz Face. It produces a fat fuzz sound.
MUFF FUZZ	Models an Electro-Harmonix Big Muff π.
Drive	Adjusts the depth of distortion.
Tone	Adjusts the tone.
Level	Adjusts the volume of the effect sound.
Bottom	Adjusts the tone for the low frequency range.
D. Level	Adjusts the volume of the direct sound.
Solo Sw	Switches the tone to one suitable for solos.
Solo Lv	Adjusts the volume level when the Solo Sw is ON.

COMPRESSOR (FxComp:)

Parameter	Explanation
BOSS COMP	Models a BOSS CS-3.
HI-BAND	A compressor that adds an even stronger effect in the high end.
LIGHT	A compressor with a light effect.
D-COMP	Models a MXR DynaComp.
ORANGE	Modeled on the sound of the Dan Armstrong ORANGE SQUEEZER.
FAT	When applied heavily, this compressor effect provides a fat tone with a boosted midrange.
MILD	When applied heavily, this compressor effect produces a sweet tone with the high end cut.
STEREO COMP	Selects a stereo compressor.
Sustain	Adjusts the range (time) over which low-level signals are boosted. Larger values will result in longer sustain.
Attack	Adjusts the strength of the picking attack when the strings are played. Higher values result in sharper attack, creating a more clearly defined sound.
Tone	Adjusts the volume.
Level	Adjusts the tone.

LIMITER (FxLmtr:)

Parameter	Explanation
BOSS LIMITER	Selects a stereo limiter.
RACK 160D	Models a dbx 160X.
VTG RACK U	Models a UREI 1178.
Attack	Adjusts the strength of the picking attack when the strings are played. Higher values result in sharper attack, creating a more clearly defined sound.
Threshold	Adjust this as appropriate for the input signal from your guitar. When the input signal level exceeds this threshold level, limiting will be applied.
Ratio	Selects the compression ratio used with signals in excess of the threshold level.
Release	Adjusts the release time.
Level	Adjusts the volume.

EQ (FxEQ:)

Parameter	Explanation
Low Gain	Adjusts the low frequency range tone.
Hi Gain	Adjusts the high frequency range tone.
LowMid Freq	Specifies the center of the frequency range that will be adjusted by the LowMid Gain.
LowMid Q	Adjusts the width of the area affected by the EQ centered at the LowMid Freq. Higher values will narrow the area.
LowMid Gain	Adjusts the low-middle frequency range tone.
Hi Mid Freq	Specifies the center of the frequency range that will be adjusted by the Hi Mid Gain.
Hi Mid Q	Adjusts the width of the area affected by the EQ centered at the Hi Mid Freq. Higher values will narrow the area.
Hi Mid Gain	Adjusts the low-middle frequency range tone.
Low Cut	Sets the frequency at which the low cut filter begins to take effect. When FLAT is selected, the low cut filter will have no effect.
Hi Cut	Sets the frequency at which the high cut filter begins to take effect. When FLAT is selected, the high cut filter will have no effect.
Level	Adjusts the overall volume level of the equalizer.

T. WAH (FxT. Wah:)

Parameter	Explanation
Mode	LPF Creates a wah effect over a wide frequency range. BPF Creates a wah effect in a narrow frequency range.
Polar	DOWN The frequency of the filter will fall. UP The frequency of the filter will rise.
Sens	Adjusts the sensitivity at which the filter will change in the direction determined by the polarity setting. Higher values will result in a stronger response. With a setting of 0, the strength of picking will have no effect.
Freq	Adjusts the center frequency of the Wah effect.
Peak	Adjusts the way in which the wah effect applies to the area around the center frequency. Higher values will produce a stronger tone which emphasizes the wah effect more. With a value of 50 a standard wah sound will be produced.
E. Level	Adjusts the volume of the effect sound.
D. Level	Adjusts the volume of the direct sound.

FX Parameter

PITCH SHIFTER (FxPS:)

Parameter	Explanation	
Voice	1-VOICE	One-voice pitch-shifted sound output in monaural.
	2-MONO	Two-voice pitch-shifted sound (PS1, PS2) output in monaural.
	2-STEREO	Two-voice pitch-shifted sound (PS1, PS2) output through left and right channels.
Mode1 Mode2 *1	FAST, MEDIUM, SLOW	The response is slower in the order of FAST, MEDIUM and SLOW, but the modulation is lessened in the same order.
	MONO	MONO is used for inputting single notes. * You may be unable to produce the intended effect when playing chords (two or more notes played simultaneously).
Pitch1 Pitch2 *1	Adjusts the amount of pitch shift (the amount of interval) in semitone steps.	
Fine1 Fine2 *1	Make fine adjustments to the interval. The amount of the change in the Fine 100 is equivalent to that of the Pitch 1.	
P. Delay1 P. Delay2 *1	Adjusts the time from when the direct sound is heard until the pitch shifted sounds are heard. Normally you can leave this set at 0 ms. * When set to BPM, the value of each parameter will be set according to the value of the "MASTER BPM" specified for each patch. This makes it easier to achieve effect sound settings that match the tempo of the song. * If, due to the tempo, the time is longer than the range of allowable settings, it is then synchronized to a period either 1/2 or 1/4 of that time.	
F. Back1	Adjusts the feedback amount of the pitch shift sound.	
E. Level1 E. Level2 *1	Adjusts the volume of the pitch shifter.	
D. Level	Adjusts the volume of the direct sound.	

*1: Setting not available when Voice is set to 1-VOICE.

HARMONIST (FxHrm:)

Parameter	Explanation	
Voice	1-VOICE	One-voice pitch-shifted sound output in monaural.
	2-MONO	Two-voice pitch-shifted sound (PS1, PS2) output in monaural.
	2-STEREO	Two-voice pitch-shifted sound (PS1, PS2) output through left and right channels.
Harm1 harm2 *1	Determines the pitch of the sound added to the input sound, when you are making a harmony. It allows you to set it by up to 2 octaves higher or lower than the input sound. When the scale is set to USER, this parameter sets the user scale number to be used.	
P. Delay1 P. Delay2 *1	Adjusts the time from when the direct sound is heard until the pitch shifted sounds are heard. Normally you can leave this set at 0 ms. * When set to BPM, the value of each parameter will be set according to the value of the "MASTER BPM" specified for each patch. This makes it easier to achieve effect sound settings that match the tempo of the song. * If, due to the tempo, the time is longer than the range of allowable settings, it is then synchronized to a period either 1/2 or 1/4 of that time.	
F. Back1	Adjusts the feedback amount of the pitch shift sound.	
E. Level1 E. Level2 *1	Adjusts the volume of the pitch shifter.	
MastrKey	The key setting corresponds to the key of the song (#, b) as follows. <div><div>Major</div><div>C F B^b E^b A^b D^b</div><div>Minor</div><div>Am Dm Gm Cm Fm Bbm</div></div> <div><div>Major</div><div>C G D A E B F[#]</div><div>Minor</div><div>Am Em Bm Fbm Cm Gbm Dbm</div></div>	
D. Level	Adjusts the volume of the direct sound.	

*1: Setting not available when Voice is set to 1-VOICE.

PEDAL BEND (FxP. Bnd:)

Parameter	Explanation	
Pitch	Sets the pitch at the point where the EXP Pedal is all the way down.	
Position	Adjusts the pedal position for pedal bend. This parameter is used after it's been assigned to an EXP Pedal or similar controller.	
E. Level	Adjusts the volume of the pitch bend sound.	
D. Level	Adjusts the volume of the direct sound.	

PHASER (FxPhasr:)

Parameter	Explanation	
Type	4STAGE	A four-phase effect. A light phaser effect is obtained.
	8STAGE	An eight-phase effect. It is a popular phaser effect.
	12STAGE	A twelve-phase effect. A deep phase effect is obtained.
	BiPHASE	The phaser with two phase shift circuits connected in series.
Rate	Sets the rate of the phaser effect. * When set to BPM, the value of each parameter will be set according to the value of the "MASTER BPM" specified for each patch. This makes it easier to achieve effect sound settings that match the tempo of the song. * If, due to the tempo, the time is longer than the range of allowable settings, it is then synchronized to a period either 1/2 or 1/4 of that time.	
Depth	Determines the depth of the phaser effect.	
Manual	Adjusts the center frequency of the phaser effect.	
Reso	Determines the amount of resonance (feedback). Increasing the value will emphasize the effect, creating a more unusual sound.	
Step Rate	Sets the cycle of the step function that changes the rate and depth. When it is set to a higher value, the change will be finer. Set this to "Off" when not using the Step function. * When set to BPM, the value of each parameter will be set according to the value of the "MASTER BPM" specified for each patch. This makes it easier to achieve effect sound settings that match the tempo of the song. * If, due to the tempo, the time is longer than the range of allowable settings, it is then synchronized to a period either 1/2 or 1/4 of that time.	
E. Level	Adjusts the volume of the phaser.	
D. Level	Adjusts the volume of the direct sound.	

FLANGER (FxFlngr:)

Parameter	Explanation	
Rate	Sets the rate of the flanging effect. * When set to BPM, the value of each parameter will be set according to the value of the "MASTER BPM" specified for each patch. This makes it easier to achieve effect sound settings that match the tempo of the song. * If, due to the tempo, the time is longer than the range of allowable settings, it is then synchronized to a period either 1/2 or 1/4 of that time.	
Depth	Determines the depth of the flanging effect.	
Manual	Adjusts the center frequency at which to apply the effect.	
Reso	Determines the amount of resonance (feedback). Increasing the value will emphasize the effect, creating a more unusual sound.	
Separatr	Adjusts the diffusion. The diffusion increases as the value increases.	
Low Cut	Sets the frequency at which the low cut filter begins to take effect. When "Flat" is selected, the low cut filter will have no effect.	
E. Level	Adjusts the volume of the flanger.	
D. Level	Adjusts the volume of the direct sound.	

TREMOLO (FxTrml:)

Parameter	Explanation	
Wave Shape	Adjusts changes in volume level. A higher value will steepen wave's shape.	
Rate	Adjusts the frequency (speed) of the change. * When set to BPM, the value of each parameter will be set according to the value of the "MASTER BPM" specified for each patch. This makes it easier to achieve effect sound settings that match the tempo of the song. * If, due to the tempo, the time is longer than the range of allowable settings, it is then synchronized to a period either 1/2 or 1/4 of that time.	
Depth	Adjusts the depth of the effect.	
E. Level	Adjusts the volume.	

PAN (FxPan:)

Parameter	Explanation	
Type	AUTO	Varies the volume level on the left and right according to the settings for Wave Shape, Rate, and Depth.
	MANUAL	Output uses the volume balance set with Manual Position.
Wave Shape *1	Adjusts changes in volume level. A higher value will steepen wave's shape.	
Rate *1	Adjusts the frequency (speed) of the change. * When set to BPM, the value of each parameter will be set according to the value of the "MASTER BPM" specified for each patch. This makes it easier to achieve effect sound settings that match the tempo of the song. * If, due to the tempo, the time is longer than the range of allowable settings, it is then synchronized to a period either 1/2 or 1/4 of that time.	
Depth	Adjusts the depth of the effect.	
M. Position *2	Adjusts the volume balance between the left and right channels.	
E. Level	Adjusts the volume.	

*1: Setting available when Type is set to AUTO.

*2: Setting available when Type is set to MANUAL.

ROTARY (FxRot:)

Parameter	Explanation
SpeedSelect	Changes the simulated speaker's rotating speed (SLOW or FAST).
Rate Slow	Adjusts the Speed Select of rotation when set to "SLOW."
Rate Fast	This parameter adjusts the speed select of rotation when set to "FAST." * When set to BPM, the value of each parameter will be set according to the value of the "MASTER BPM" specified for each patch. This makes it easier to achieve effect sound settings that match the tempo of the song. * If, due to the tempo, the time is longer than the range of allowable settings, it is then synchronized to a period either 1/2 or 1/4 of that time.
Rise Time	Adjusts the time it takes for the rotation Speed Select to change when switched from "SLOW" to "FAST."
Fall Time	Adjusts the time it takes for the rotation Speed Select to change when switched from "FAST" to "SLOW."
Depth	Adjusts the amount of depth in the rotary effect.
E. Level	Adjusts the volume.

UNI-V (FxUni-V:)

Parameter	Explanation
Rate	Adjusts the rate of the UNI-V effect. * When set to BPM, the value of each parameter will be set according to the value of the "MASTER BPM" specified for each patch. This makes it easier to achieve effect sound settings that match the tempo of the song. * If, due to the tempo, the time is longer than the range of allowable settings, it is then synchronized to a period either 1/2 or 1/4 of that time.
Depth	Adjusts the depth of the UNI-V effect.
E. Level	Adjusts the volume.

CHORUS (FxChorus:)

Parameter	Explanation
Mode	MONO This chorus effect outputs the same sound from both L channel and R channel.
	STEREO1 A stereo chorus effect that adds different chorus sounds to L channel and R channel.
	STEREO2 This stereo chorus uses spatial synthesis, with the direct sound output in the L channel and the effect sound output in the R channel.
Rate	Adjusts the rate of the chorus effect. * When set to BPM, the value of each parameter will be set according to the value of the "MASTER BPM" specified for each patch. This makes it easier to achieve effect sound settings that match the tempo of the song. * If, due to the tempo, the time is longer than the range of allowable settings, it is then synchronized to a period either 1/2 or 1/4 of that time.
Depth	Adjusts the depth of the chorus effect. * To use it for doubling effect, set the value to 0.
Pre Dly	Adjusts the time needed for the effect sound to be output after the direct sound has been output. By setting a longer pre delay time, you can obtain an effect that sounds like more than one sound is being played at the same time (doubling effect).
Low Cut	Sets the frequency at which the low cut filter begins to take effect. When "Flat" is selected, the low cut filter will have no effect.
Hi Cut	Sets the frequency at which the high cut filter begins to take effect. When "Flat" is selected, the high cut filter will have no effect.
E. Level	Adjusts the volume of the effect sound.

DELAY (FxDly:)

Parameter	Explanation
Type	MONO A simple monaural delay.
	PAN Provides a tap delay effect that divides the delay time between the left and right channels.
Time	Adjusts the delay time. * When set to BPM, the value of each parameter will be set according to the value of the "MASTER BPM" specified for each patch. This makes it easier to achieve effect sound settings that match the tempo of the song. * If, due to the tempo, the time is longer than the range of allowable settings, it is then synchronized to a period either 1/2 or 1/4 of that time.
Feedback	Adjusts the volume that is returned to the input. Higher settings will result in more delay repeats.
High Cut	Sets the frequency at which the high cut filter begins to take effect. When "FLAT" is selected, the high cut filter will have no effect.
Pan Tap Time *1	Adjusts the delay time of the left channel delay. This setting adjusts the L channel delay time relative to the R channel delay time (considered as 100%).
E. Level	Adjusts the volume of the delay sound.
D. Level	Adjusts the volume of the direct sound.

*1: Setting available when Type is set to PAN.

Stereo/Mono Support for Each Effect

MONO : This effect sound is mono.

MONO > STEREO : These effects take a mono input and output it on two channels.

STEREO : This effect sound is output with two channels.

USB Routing (USBAudio: Routing)

STANDARD

Use this setting if you're playing guitar while playing back a song from your computer. Only the sound of the GP-10 is output to the computer.

MIX

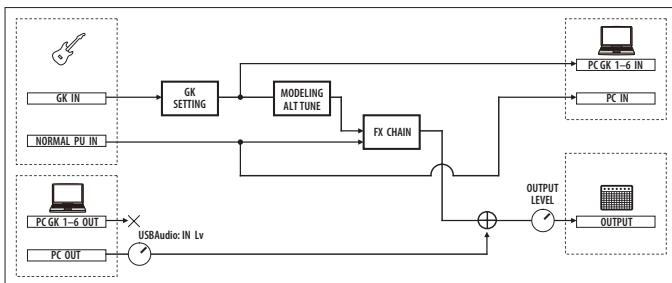

Use this setting if you're playing guitar while playing back a song from your computer. The sound of the GP-10 and the backing from the computer are mixed and output to the computer.

DRY-GUITAR

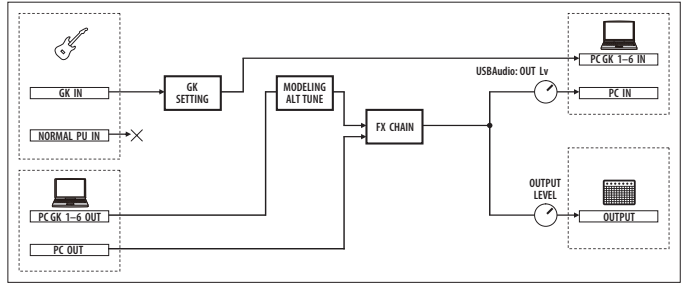

Use this setting if you want to "re-guitar" or "re-amp" your guitar sound after you've recorded it.

The original sound of the guitar without modeling or effects is output to the computer. The individual strings are output as six separate channels from the modeling signal route, and the original sound from the normal guitar route is also output.

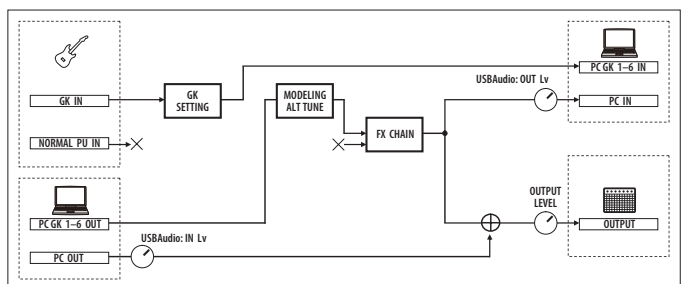

RE-GUITAR/AMP I

Use this setting if you want the original sound of the guitar without modeling or effects to be input to the GP-10 so that you can re-guitar or re-amp.

RE-GUITAR/AMP II

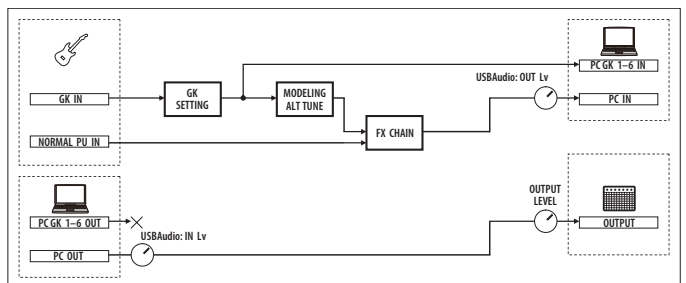

Use this setting to re-guitar along with backing that's played back from your computer.

DIRECT OFF

Use this setting if you want the signal processed by plug-in effects on your DAW to be output to the GP-10's OUTPUT.

The output of the GP-10 is output only to your computer.

What is RE-GUITAR/RE-AMP?

These are techniques in which the original sound of the guitar without modeling or effects is recorded on your DAW so that you can create the final guitar sound afterward.

Have you ever experienced either of these regrets or failures after recording an effect-processed guitar?

- You played well, but you're not happy with the sound.
- The guitar sound no longer stands out when combined with other parts in your DAW software.

As long as you still have the original sound, you can use re-guitaring or re-amping to reshape the sound of your original performance as many times as you like, letting you record a truly satisfactory sound and performance into your DAW.

If you want to record the original sound of your guitar without modeling or effects, choose "DRY-GUITAR," and then use "RE-GUITAR/AMP I" or "RE-GUITAR/AMP II" to re-record it.
